gen Join the beta test of Advanced Configurator 2.0! Advanced Configurator 2.0 is the latest edition of our advanced frontend for Windows XP. It's basically a reference frontend to all parts of the Dolphin sound enhancer, which includes presets, spectrum analysis, output devices, effects and docked. If you are not sure about upgrading from the previous version of Advanced Configurator, please take a moment to read the below articles about it. If you want to try out this new version, you can do it in a very easy way. Just download the executable (or executable+installer, if you want to get both for a complete, single installation) file, right-click it and select Run As Administrator. Note: Even if you don't have an administrator account (which is the default for a trial version), it will ask you to do a standard installation, by default, right after the setup. When it's done, you will have a menu with the different parts of the sound enhancer, all of them with fully customizable control. Note: Please remember to use the latest version of Dolphin itself, which is currently 12.0 (12.5beta is a bug fix). Version information: Advanced Configurator 2.0 (beta version) OS: Windows XP/Vista/7/8 Dolphin version: 12.0 beta Sound enhancer version: 13.025 premium Advanced Configurator 2.0 FAQ Advanced Configurator 2.0 is the newest version of our Advanced Configurator, as well as the latest available version of the Sound Enhancer. Note: I've just released a new version of Advanced Configurator (version 2.0, see above), in which I added a lot of new features and improvements. Now I invite you to try it and see if it fits your needs. It's basically a reference frontend to all parts of the Dolphin sound enhancer, which includes presets, spectrum analysis, output devices, effects and docked. If you are not sure if3e1b3768c
